

KILLEEN INDEPENDENT SCHOOL DISTRICT

Health Services' Guidelines for Exclusion from School

In accordance with 25 Tex. Admin. Code § 97.7 and Killeen ISD policy, school administrators may exclude children from school suspected or confirmed as having a communicable disease. The Department of State Health Services has provided a communicable disease chart for decision-making on when to exclude children and return to school procedures. Each campus has a copy of the newest communicable disease chart in poster form, which is posted in the nurse's office.

It is especially important to remember that only Medical Doctors, Nurse Practitioners, Physician Assistants, and Nurse Specialist can diagnose. If something warrants going to the doctor, a call will be made to the parent/guardian to suggest going to the doctor.

The following procedure is a guide in determining when to send a student for a potentially communicable disease: this is just a guide and is not all incumbent, nurses' judgment should also be used.

Procedure:

- 1. Recognition of potential communicable disease**
- 2. Keep students away from other students in the clinic, if not possible in a separate location**
- 3. The school nurse, with the principal or his/her designee, will notify parents that the student must be excluded for medical reasons for 24 hours or as indicated by the Texas DSHS School Communicable Disease Chart.**
- 4. The parent or guardian is responsible for transporting the student from school to his/her home immediately.**
 - a. If the student cannot be picked up within 60 minutes of the exclusion notice, we request prompt communication from parents. The campus administration and the community liaison will be notified to assist parents with arrangements.**
- 5. A Disease Exclusion Letter is sent home for provider clearance**
- 6. May return if symptoms have cleared and nurse verifies resolution of symptoms.**
- 7. Request deep cleaning of classroom and communal areas if indicated by Texas DSHS School Communicable Disease Chart.**
- 8. Monitor for additional symptoms such as potential outbreaks.**

A student with the following symptoms will be excluded from school until they are free of symptoms, have been satisfactorily treated, or submit a signed physician's statement that they are not contagious.

- Temperature of 100.0 degrees or more. Students must be fever free for 24 hours, without medication, before re-entry.
- New, undiagnosed rash or skin condition, at the nurse's discretion, until verified by healthcare provider that it is not contagious.
- Vomiting 3 or more times in a 24-hour period is not related to a preexisting, documented condition, or exercise. Students must be symptoms free for 24 hours, without medication, before re-entry.

- Diarrhea 3 or more loose stools in a 24-hour period that is not related to a preexisting, documented condition. Students must be symptoms free for 24 hours, without medication, before re-entry.
- Yellow or green discharge from the eyes. Return to school once assessed by a medical provider and cleared/24 hours after treatment started or symptoms have resolved (as verified by the nurse).
- Live lice- students with live lice will be sent home for treatment and may return the next day after being treated and evaluated by the nurse.
- If the student is not acting their norm, such as they are very tired or sleepy, droopy, or puffy eyes or other symptoms preventing them from performing academically.
- Students with draining wounds that cannot be covered with proper bandages.
- Moderate to severe pain indicated by the Wong-Baker FACES Pain Scale utilized by the clinics.
- As considered necessary by the clinic staff judgement or assessment.

For readmission, some diseases may require a statement from the student's physician affirming that the student is not contagious.
